Non-technical side is equally important

- The ups and downs of everything
- Motivation is overrated, persistence is the key
- Comparison ruins it, mind your own timeline
- Negotiation and trade off
- Stay relevant
- Efforts do matter

Things are always changing. Part of being successful here is being comfortable with not knowing what's going to happen.

PROTECTING AGAINST SQL INJECTION

SQL injection is a type of injection attack. Injection attacks occur when maliciously crafted inputs are submitted by an attacker, causing an application to perform an unintended action. Because of the ubiquity of SQL databases, SQL injection is one of the most common types of attack on the internet.

If you only have time to protect yourself against one vulnerability, you should be checking for SQL injection vulnerabilities in your codebase.
